PALANTIR C2

AI-Powered Command & Control

SEED ROUND | $5M

Automating the F2T2EA kill chain with multi-agent AI
for defense & allied nations

THE OPPORTUNITY

A $28B market with a broken status quo

$28B

Global C2 Market
by 2030

14.2%

CAGR
2024-2030

78%

Of kill chains still
rely on manual handoffs

- Kill chain cycle times measured in hours, not minutes — adversaries are faster
- Sensor data fragmented across stovepipe systems with no unified fusion layer
- Existing C2 systems cost $100M+ and take 3-5 years to deploy
- Critical shortage of trained ISR analysts — demand exceeds supply 4:1

THE SOLUTION

End-to-end AI C2 that deploys in weeks, not years

9 AI Agents

Multi-agent orchestration automates the complete F2T2EA kill chain from sensor to shooter. Reduces cycle time from hours to minutes.

Sensor-Agnostic Fusion

Complementary fusion across EO/IR, SAR, SIGINT, GMTI, and FMV. Works with any hardware — no vendor lock-in.

Two-Gate HITL

Auditable human-in-the-loop at every engagement decision. Three autonomy levels from MANUAL to AUTONOMOUS.

- Deploys in weeks vs. years for legacy C2 systems
- Zero-config operation — runs without API keys in heuristic mode
- 475 tests, typed contracts, production-grade engineering

PRODUCT

Four integrated subsystems, one platform

3D Command Dashboard

React + CesiumJS globe with 6 map modes, multi-layout drone cameras, and 75 UI components. Operators see everything in real-time.

Simulation Engine

Physics-based UAV dynamics, 10 target types with unique AI behaviors, multi-sensor detection model, and swarm coordination.

AI Agent Layer

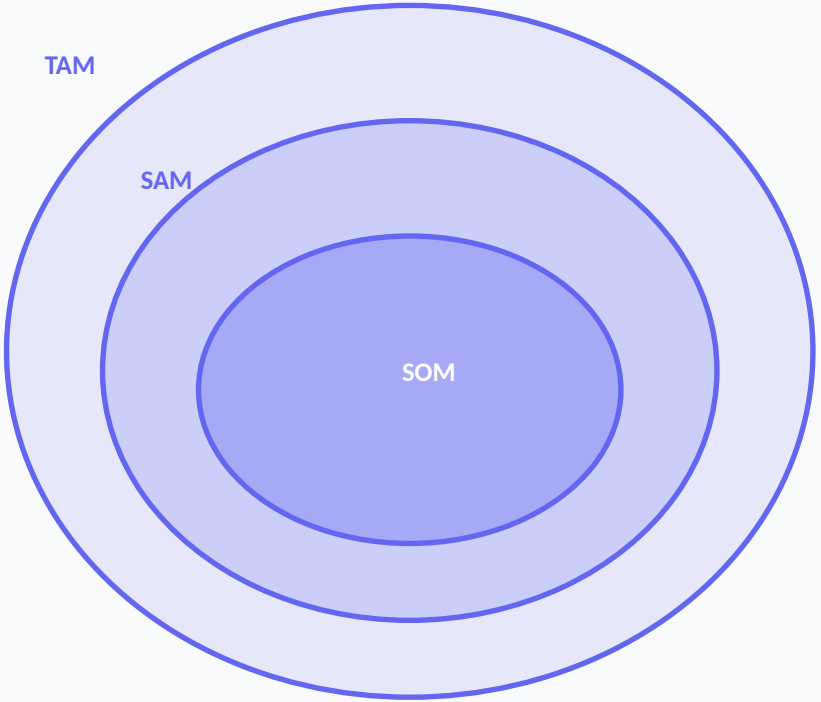
9 LangGraph agents covering ISR, strategy, tactics, and effects. Multi-LLM fallback chain (Gemini → Anthropic → Ollama → Heuristic).

Theater Engine

YAML-configurable theaters (Romania, South China Sea, Baltic) with custom ORBAT, ROE, weather, and terrain. New scenarios in minutes.

MARKET SIZE

Large, growing, and underserved by incumbents



TAM **$28B**

Global C2 & ISR market (DoD, NATO, Five Eyes, allied nations)

SAM **$4.2B**

AI-enabled C2 software for Western defense forces — excludes hardware, legacy platforms

SOM **$180M**

US DoD + Five Eyes initial addressable contracts for AI kill-chain automation in Year 5

BUSINESS MODEL

Land with software, expand with services

60%

Platform License

Annual SaaS license per operational theater. Tiered by UAV count, user seats, and agent capabilities.

25%

Integration Services

Custom theater configuration, sensor integration, and C2 system interop. High-margin professional services.

15%

Training & Support

Operator training programs, 24/7 mission support, and ongoing theater scenario development.

Target Unit Economics

$800K-$2M	75-80%	130%+	<18mo
ACV — Per theater	Gross Margin — Software-led	Net Retention — Theater expansion	Payback — CAC recovery

GO-TO-MARKET

Defense-first, then expand to allies

PHASE 1

Year 1-2

US DoD Beachhead

SBIR/STTR contracts
DIU engagement
AFWERX demos
2-3 pilot programs

PHASE 2

Year 2-3

Program of Record

ACAT III pathway
ATO/IL5 certification
First production contracts
$5-10M ARR

PHASE 3

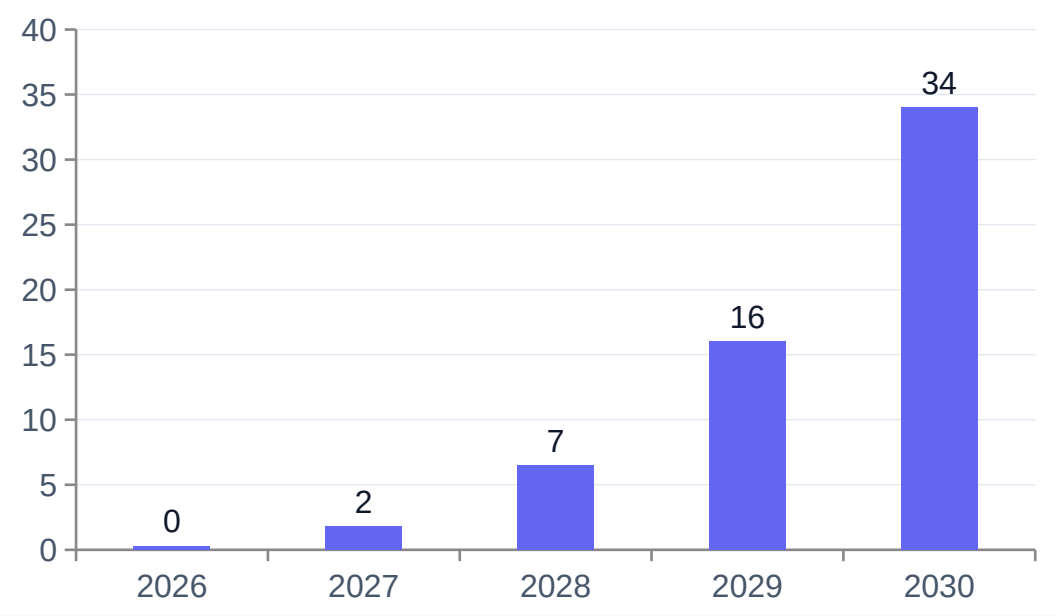
Year 3-5

Allied Expansion

Five Eyes partners
NATO interop
FMS pipeline
$30M+ ARR

FINANCIAL PROJECTIONS

Path to $30M+ ARR in 5 years



Key Metrics

Year 5 ARR	**$34M**
Gross Margin	**78%**
Customers	**12-18**
NRR	**130%+**
CAC Payback	**<18mo**
Rule of 40	**85+**

Assumptions: 2-3 pilot contracts in Year 1, first production contract Q3 2027, Five Eyes expansion from 2028. ACV $800K-$2M with 130%+ NRR from theater expansion.

COMPETITIVE LANDSCAPE

The only end-to-end AI kill chain platform

	Palantir C2	Legacy C2 (Raytheon, L3)	Palantir Technologies	Anduril Lattice
AI Kill Chain	✓ Full F2T2EA	✗ Manual	~ Partial	~ Partial
Multi-Sensor Fusion	✓ 5 sensor types	✗ Siloed	✓ Yes	~ Limited
Swarm Coordination	✓ Built-in	✗ No	✗ No	✓ Yes
HITL Approval Gates	✓ Two-gate	~ Manual only	✓ Yes	✓ Yes
Deploy Time	Weeks	3-5 years	Months	Months
Open Architecture	✓ YAML configs	✗ Proprietary	~ Semi-open	✗ Proprietary
Heuristic Fallback	✓ No keys needed	✗ N/A	✗ Requires LLM	✗ Requires infra
Cost	$800K-$2M ACV	$50-100M+	$10M+	$5-20M+

TRACTION

Built and battle-tested — not a slide deck

475
Passing Tests
Production-grade quality

32K+
Lines of Code
138 Python modules

75
UI Components
React + TypeScript

9
AI Agents
Full kill chain coverage

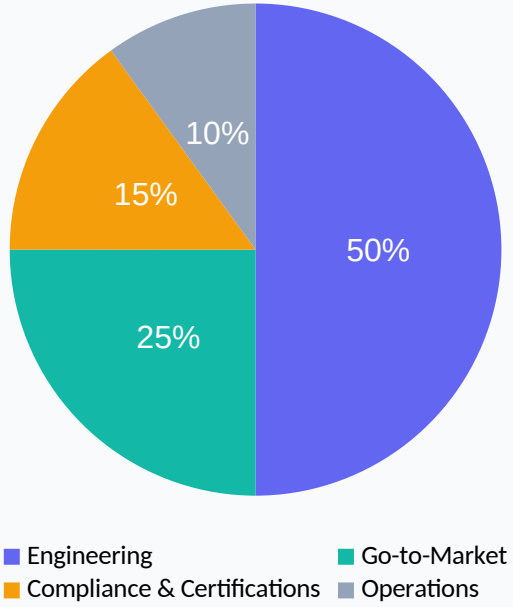
3
Theater Configs
Romania, SCS, Baltic

30
WS Actions
Real-time protocol

Next Milestones: SBIR Phase I submission (Q2 2026) → DIU prototype demo (Q3 2026) → AFWERX STRATFI application (Q4 2026) → First pilot deployment (Q1 2027)

THE ASK

$5M Seed to reach first production contract



Engineering (50%) — $2.5M

Expand to 8 engineers. Build sensor integrations, harden for IL5, and scale swarm capabilities.

Go-to-Market (25%) — $1.25M

Hire BD lead and solution architect. Fund SBIR/STTR applications and DIU prototype demos.

Compliance (15%) — $750K

ATO process, FedRAMP IL5 pathway, ITAR compliance, and security certifications.

Operations (10%) — $500K

Cloud infrastructure, legal, and 18 months of runway buffer.

18-month runway to Series A triggers: first production contract, $1.5M+ ARR, 3+ active theaters

WHY NOW

Convergence of tailwinds makes this the moment

DoD AI Mandate

CDAO's AI adoption strategy requires AI-enabled C2 across all combatant commands by 2028. Budget allocation tripled since 2023.

LLM Cost Collapse

Multi-agent AI that cost $100K/month in 2023 now runs for $5K/month. Heuristic fallback makes it deployable at zero marginal AI cost.

Peer Threat Urgency

China and Russia fielding AI-enabled autonomous systems. NATO allies accelerating AI C2 procurement — 5x budget increases across Europe.

Regulatory Clarity

DoD Directive 3000.09 updated for autonomous weapons. Clear framework for HITL AI systems — exactly what Palantir C2 implements.

PALANTIR C2

$5M Seed | 18-Month Runway | First Production Contract

The AI kill chain is inevitable. We're building it now.
